Hack The Box Talk - Setup Guide

This repository contains setup materials for the HTB (Hack The Box) talk, including a Kali Linux VM and a tool installation script.

Table of Contents

- Prerequisites
- Installing VMware
- Installing Kali Linux
- Running the Tool Installation Script
- Tools Installed

Prerequisites

- A computer with at least **8GB RAM** (16GB recommended)
- At least **50GB** of free disk space
- Virtualization enabled in BIOS/UEFI (Intel VT-x or AMD-V)

Installing VMware

If you haven't yet have a Kali Linux VM, I have provided an exe for you guys to install. Please be sure to click and install first. You can download it from https://drive.google.com/drive/folders/1QQyk3JtvSkOf7fQmAnBpaJRBDmlsZiJv?usp=sharing

Installing Kali Linux

Using the Pre-configured VM (Recommended)

We are going to use a Kali Linux, if you do not have it yet, you can download using this link https://www.kali.org/get-kali/#kali-virtual-machines, choose for VMWare and open/import it inside VMWare.

Running the Tool Installation Script

Once Kali Linux is running, follow these steps to install the required tools:

Step 1: Transfer the Script

Clone/Download directly in Kali

1. Open a terminal in Kali and clone the gist:

```
git clone https://gist.github.com/Jerit3787/2cda2b3a62517109cb8f50e5a2254a62.git htb-tools
```

Tools Installed

The `install-htb-tools.sh` script installs the following tools:

Tool	Description
GDB	GNU Debugger - essential for debugging binaries
pwndbg	GDB plugin that makes debugging exploits easier
Ghidra	NSA's reverse engineering tool for analyzing binaries
pwntools	Python library for CTF and exploit development
checksec	Tool to check security properties of binaries (RELRO, Stack Canary, NX, PIE, etc.)

Troubleshooting

VMware says virtualization is disabled

- Restart your computer and enter BIOS/UEFI settings
- Enable **Intel VT-x** (Intel) or **AMD-V/SVM** (AMD)
- Save and restart

Network not working in Kali

1. In VMware, go to **VM** > **Settings** > **Network Adapter**
2. Ensure it's set to **NAT** or **Bridged**
3. Restart the VM

Quick Start Summary

```
# 1. Start Kali Linux VM in VMware
```

And that is all, see you guys in the session!
